This study was funded by a National Institute for Health Research (NIHR) Programme Grant for Applied Research (PGfAR) (grant reference RP-PG-1210-12011) and was supported by the NIHR Collaboration for Leadership in Applied Health Research and Care South West Peninsula at the Royal Devon and Exeter NHS Foundation Trust (PenCLAHRC).

The views expressed are those of the author(s) and not necessarily those of the NHS, the NIHR or the Department of Health.

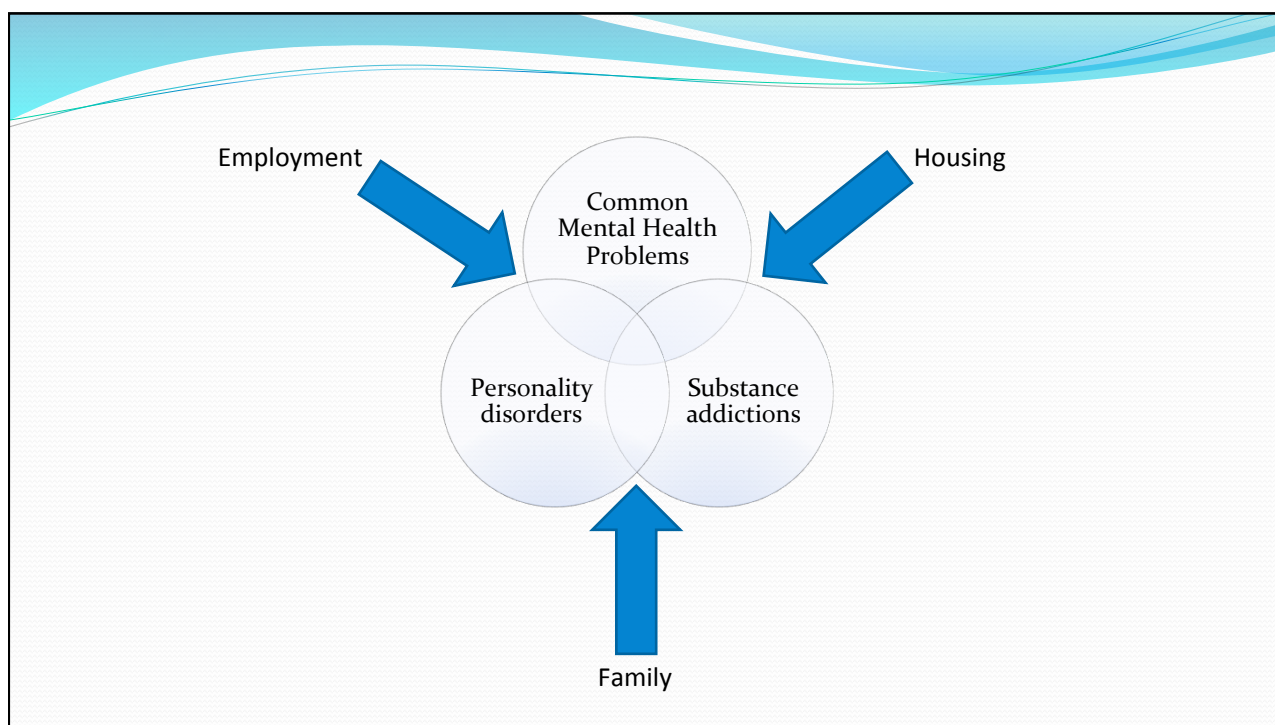

**“Which hold that causality cannot be observed and that the best we can do is demonstrate regularity between a particular intervention and a particular outcome”.**

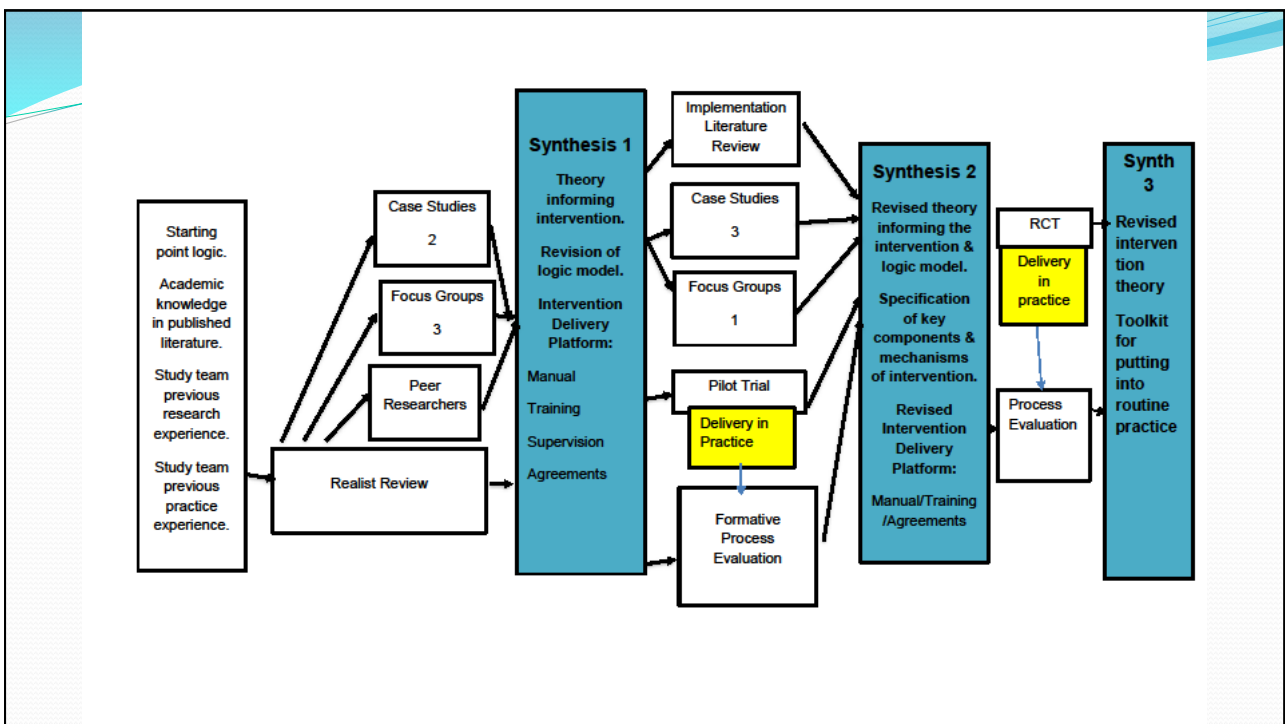

Marchal B, Westhorp G, Wong G, Van Belle S, Greenhalgh T, Pawson R. 'Realist RCTs of complex interventions – An oxymoron'. Social Science and Medicine. 2013. 94. 124-8.

**Input → BLACK BOX → Output**

- Developing a theoretically based intervention
- Adaptive to context
- Specifying the core mechanisms which produce the outcomes we intend
- Assessing if the core mechanisms have produced the desired outcomes

## Starting point logic model

- Academic knowledge in published literature.
- Study Team previous research experience.
- Study Team previous practice experience

*Established our know, knowns & identified our known unknowns*

## Phase One: Data Collection

- Realist Review
- Case studies (2)
- Focus Groups (3)
- Peer Researchers (18 meetings)

*Data collection focused on answering our known, unknowns.*

## Synthesis 1

## Phase Two: Data Collection

- Case Studies (3)
- Focus Groups (1)
- Implementation Literature Review
- Delivering the intervention in practice
- Outcomes data collected for both arms
- Formative Process Evaluation

Unknown, unknowns were surfaced in Synthesis 1 and became known, unknowns which were addressed in this phase of data collection.

## Challenges, solutions & advantages

- 1) Working with data produced from a range of ontological positions.
- 2) Progressively reducing our expansive focus while actively working against linear and reductive thinking.
- 3) Employing an explicit and inclusive decision making processes.
