Global Conference on Primary Health Care

25-26 October 2018 - Astana, Kazakhstan

World Health
Organization

Key Documents

- Declaration
- Background Report
- Operational Framework
- Monitoring and Evaluation

Core Background Documents

- Making the economic case;
- Making it happen:
 - Lessons learned
 - Country case series
 - Regional PHC reports
- PHC and:
 - NCDs
 - Mental health
 - Palliative care
 - Disabilities
 - HIV/TB/Malaria
 - Ageing
 - Hospitals
 - Traditional and complimentary medicine
 - RMNACH

Background Documents: Themes

- Health workforce for PHC
- PHC and linkages to other health sectors
- PHC in complex emergencies
- Harnessing private sector service delivery
- Strategic purchasing
- Quality improvement/quality assurance
- Technology in ambulatory care
- Health information system to support PHC
- Increasing resolution capacity of the first level of care
- Antimicrobial resistance
- Underserved and marginalized populations

The PHC Astana Declaration 2018

Astana Declaration on Primary Health Care:
Towards Universal Health Coverage and the Sustainable Development Goals

The Global Conference on Primary Health Care, acknowledging the contribution of health to
social and economic development and affirming our commitment to primary health care (PHC) in
well-being for all, leaving no one behind. We envision:

*Societies and environments that prioritize and protect people's health;
Health care that is available and affordable for everyone, everywhere;
Health care of good quality that treats people with respect and dignity;
People engaged in their own health.*

The highest possible standard of health is a fundamental right of every human being, as stated in the
Constitution of the World Health Organization. Forty years ago, in 1978, world leaders made the historical
commitment to achieve health for all through PHC in the Declaration of Alma-Ata. In 2015, leaders signed on to the
Sustainable Development Goals, which renewed commitment to health and well-being for all based on universal
health coverage (UHC). UHC means that all people, including those who are marginalized or vulnerable, should have
access to quality health services that put their needs at the centre, without financial hardship. PHC is the most
effective and equitable approach to enhance health, making it a necessary foundation to achieve UHC.

In the face of the health and development challenges of the modern era, we need PHC that:
empowers people and communities as owners of their health, as advocates for the policies that promote and
protect them, and as architects of the health and social services that contribute to it;
addresses the social, economic, environmental and commercial determinants of health through evidence-based
actions across all sectors; and
ensures strong public health and primary care throughout people's lives, as the core of integrated service delivery.

At least 80% of health needs can be addressed through this vision of PHC and UHC. However, societies do not
necessarily gravitate toward health and health equity. To be successful, we need to take deliberate actions to
strengthen the three components of PHC, emphasizing greater equity, quality and efficiency.

We are more likely to succeed than ever before. Our success will be driven by:

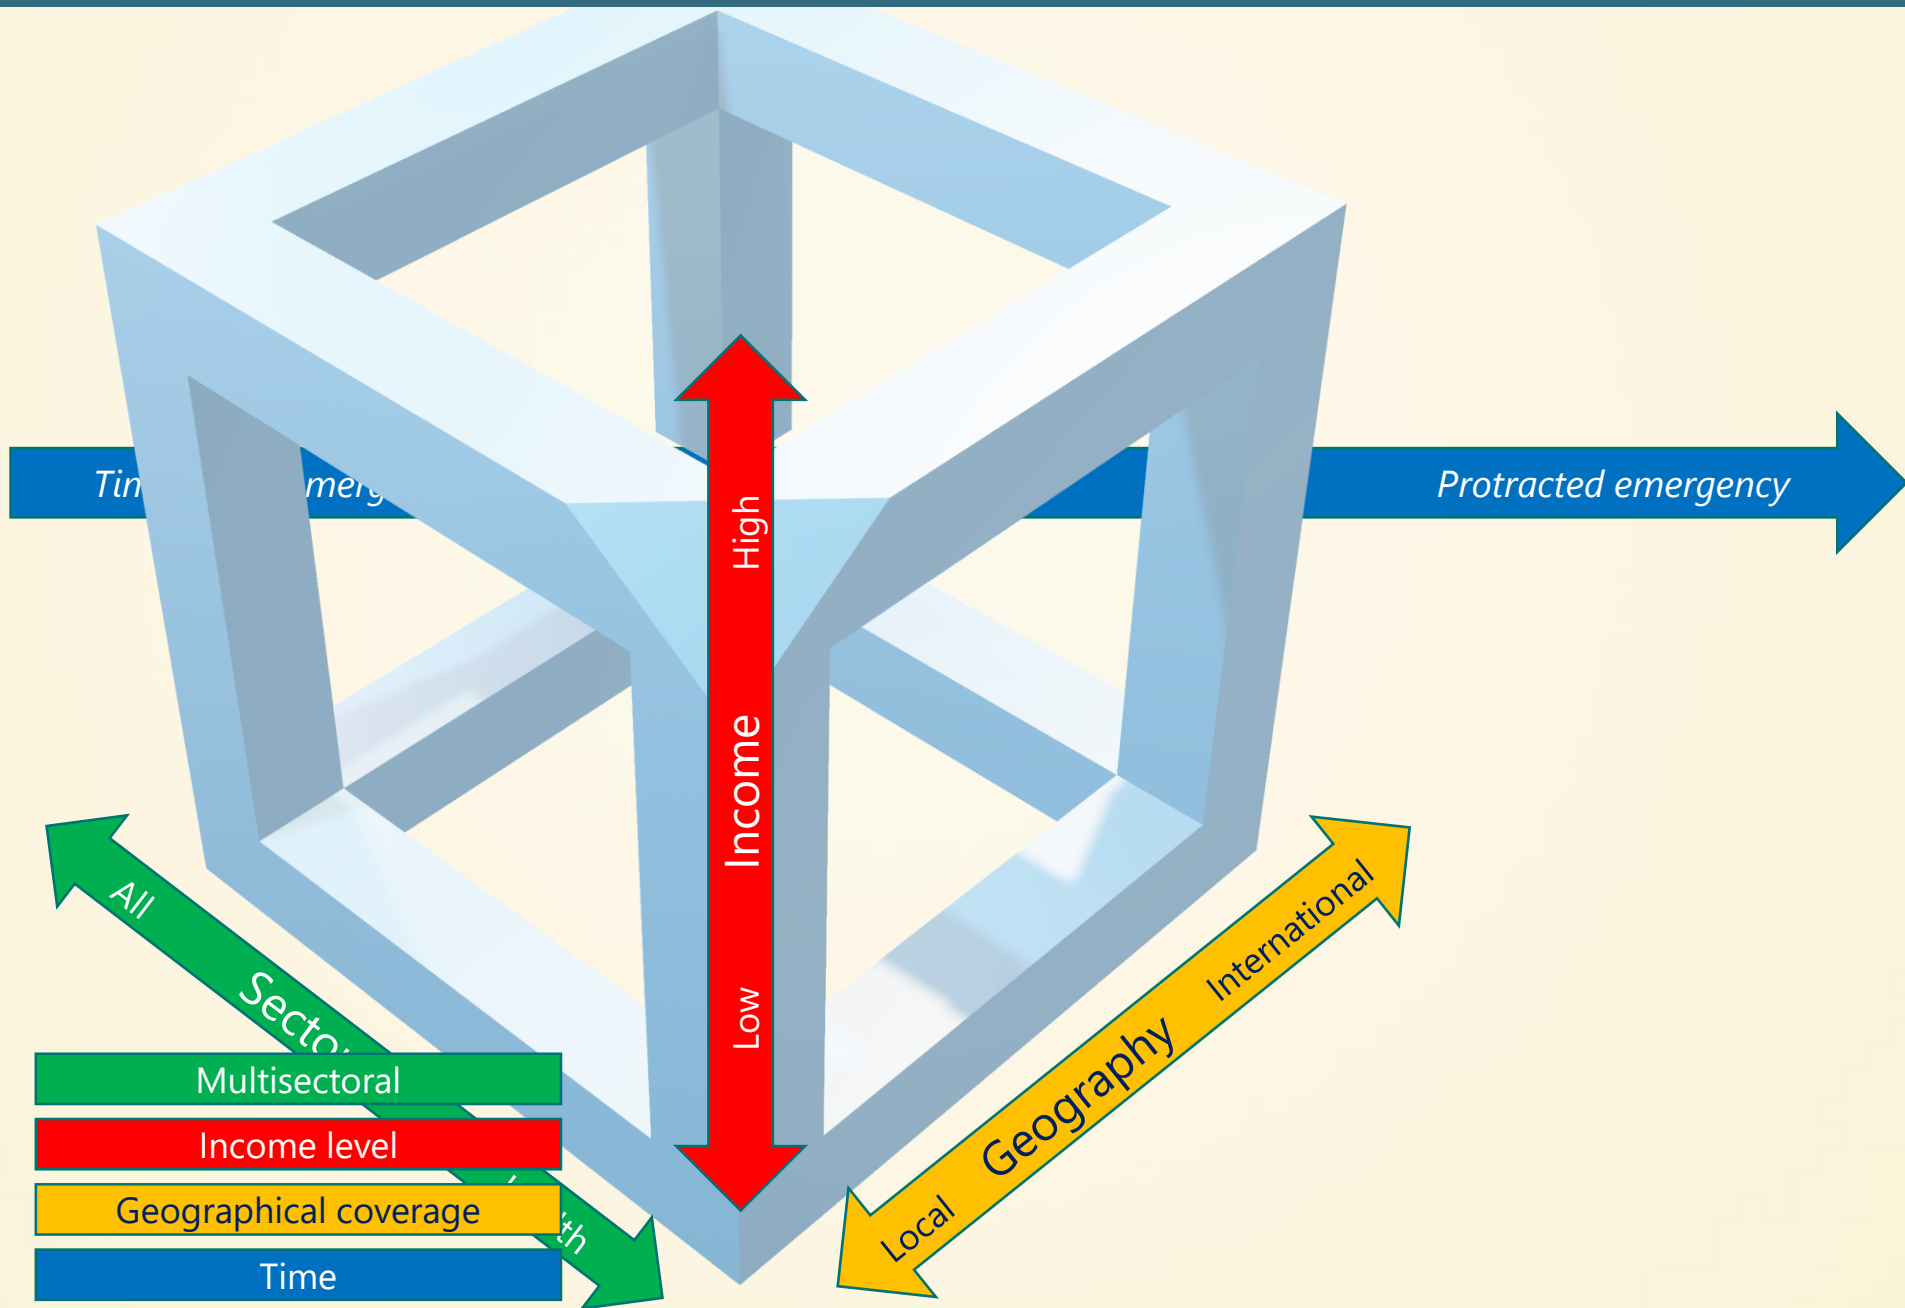

- Having more partners and more stakeholders, both public and private, working toward common
goals toward ensuring healthy lives and promoting well-being for all at all ages. With
renewed commitment to PHC
- Research that has generated solid
evidence on disease, and

A PHC approach:

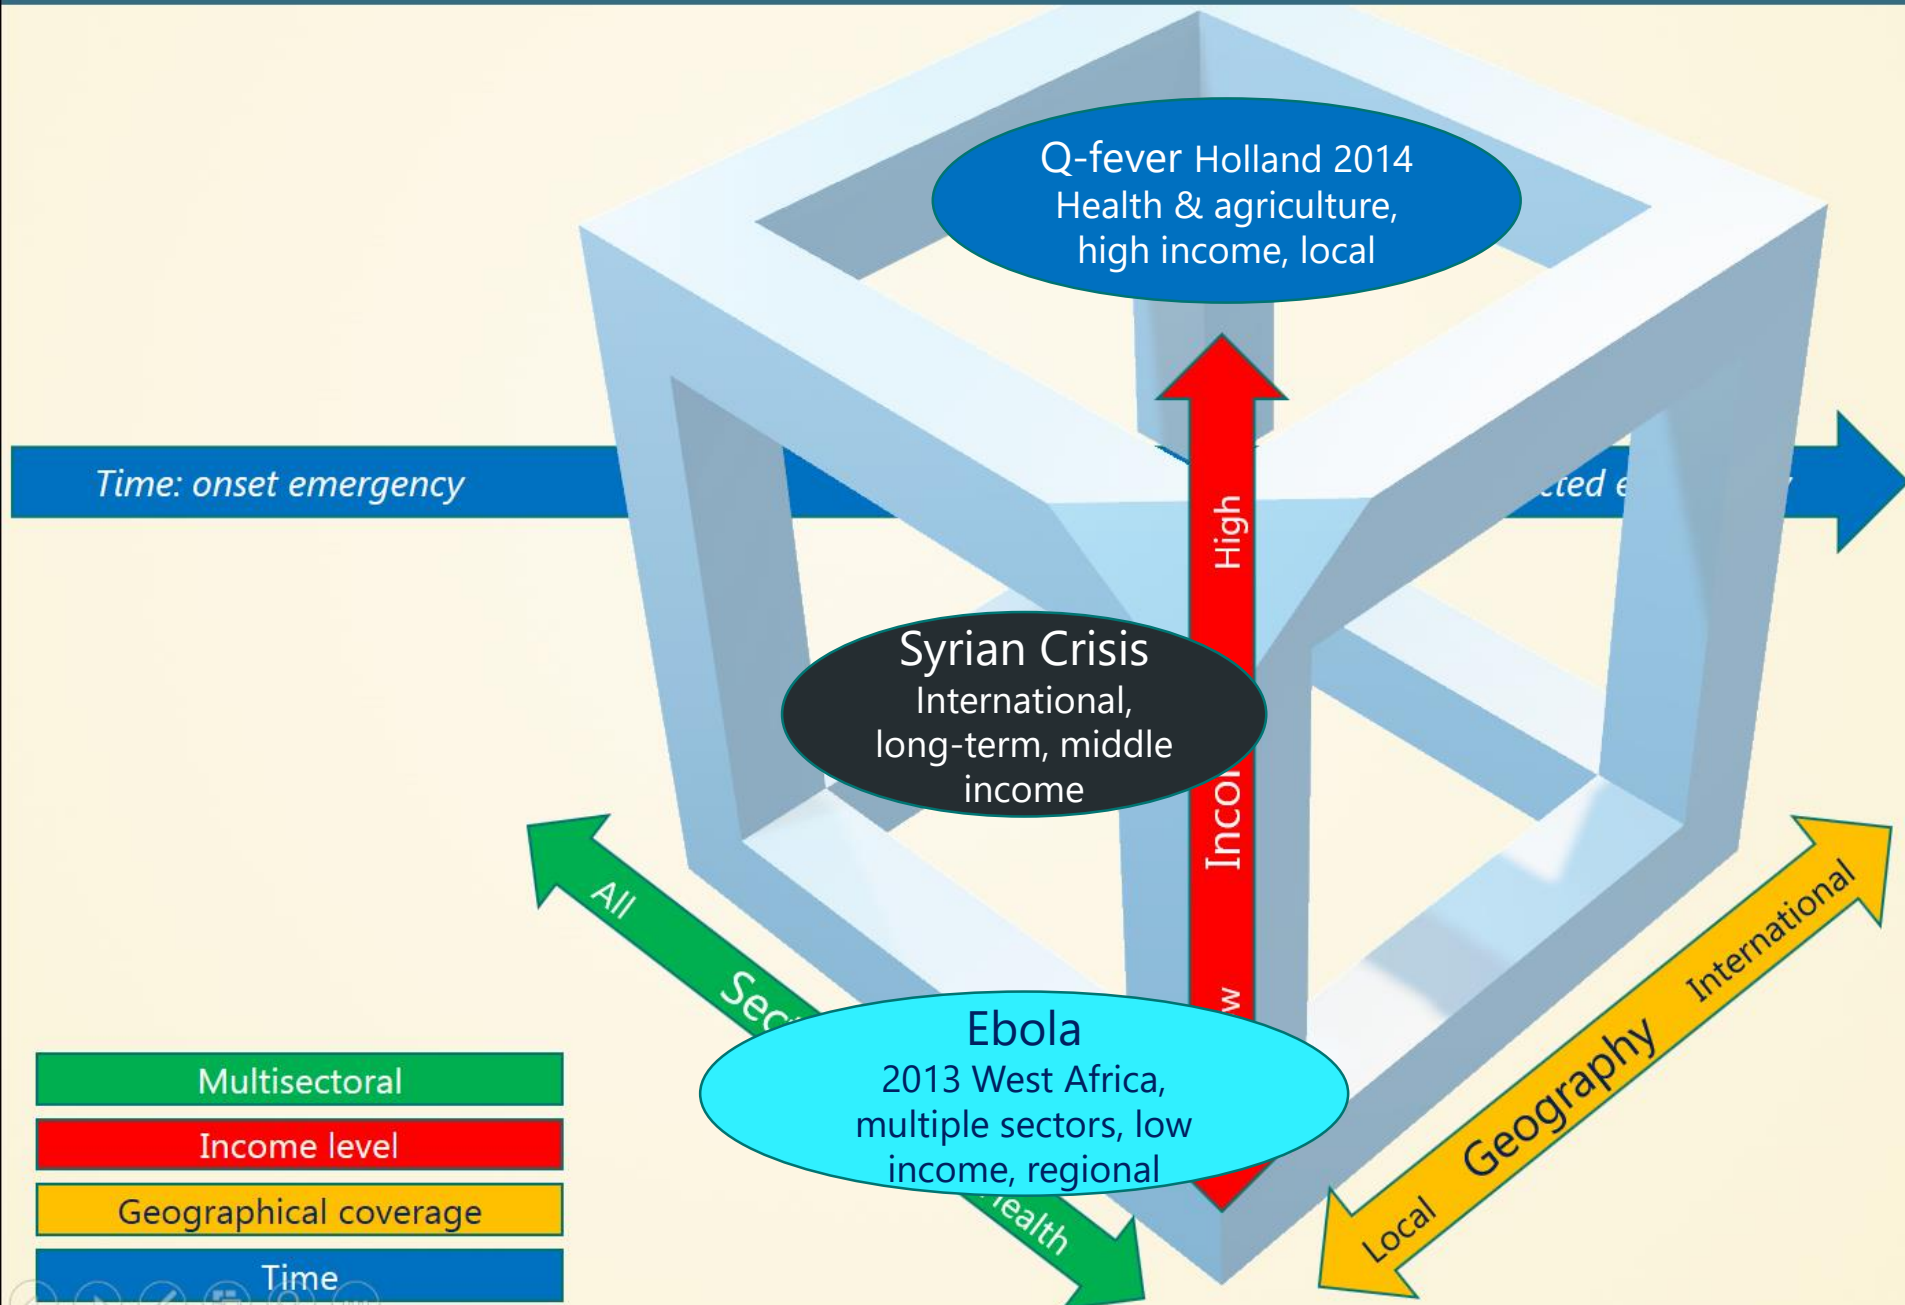

- Empowers people and communities;
- Addresses determinants of health in an inter-sectoral way;
- Ensures strong public and primary care as the core of integrated service delivery

Table of Contents

Executive Summary	3
Background and Context	3
Role and Challenges of PHC in Public Health Emergencies (PHE)	3
PHC & Public Health Emergencies – The Capacity Building Process	4
Resilient PHC on National and Global Agendas	5
Introduction	7
Background and Context	7
Role and Challenges of PHC in Public Health Emergencies	9
PHC role in preventing emergencies	9
People centeredness and community engagement	9
PHC role in continuing routine health services	10
Quality of services provided	10
PHC role in case management of Public Health Emergency related pathologies	11
Sustained recovery of PHC and the Health system	11
PHC in Fragile and Conflict-Affected Settings	11
PHC workforce in Emergencies – work force safety and specific competencies	12
Beyond Health Centers – other sources of primary care during emergencies	13
Who pays for PHC services during public health emergencies and how?	13
PHC & Public Health Emergencies – The Capacity Building Process	14
Universal Coverage Reforms: Health Equity, Solidarity & Social Inclusion	14
Service Delivery Reforms: People-Centered Care, health workforce, package of services, infrastructure and supplies, and health information.	15
Health as a Bridge for Peace	18
Strong and resilient PHC on National and Global Agendas	19
Primary Health Care and Resilience	19
Collaboration between PHC teams and humanitarian actors	19
A differentiated approach advancing PHC	20
A balanced approach to global financing	21
A global momentum re-affirming Primary Health Care.	22
Annex	23
Building PHC Resilience Using Health System Components	23

Resilience & PHC

“Strengthening PHC **resilience** in the face of emergencies is essential, and indeed for the **resilience** of the health system as a whole.

PHC’s capacity to deliver access to quality health services and PHC’s **resilience** are closely connected and inseparable.”

World Health Organization 2018

However, conceptual frameworks on the development and governance of **resilient** health systems have not explicitly referred to or included the quality Primary Health Care concept as a core element of system **resilience**.

Comprehensive Health systems strengthening, including efforts to achieve Universal Health Coverage, requires more than **resilience**.

*“**Resilience** is not quality, it is not rights, it is not coverage, it is not equity and it is not financial protection”.*

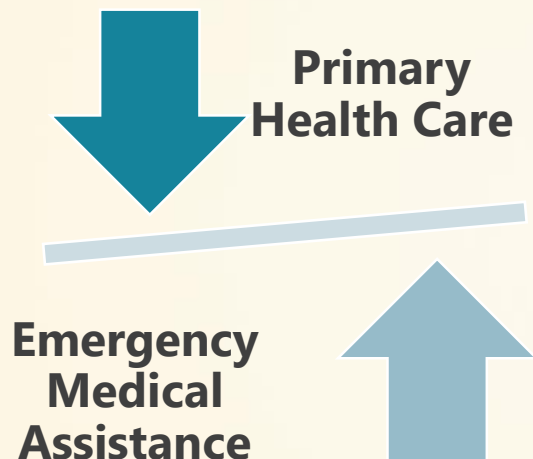

Resilience should not only be about *coping*, as this could make powerful actors expect that the poor and disadvantaged could stretch themselves in the face of challenges.

Rather, it should be about *adaptation with robustness* with health systems strengthening as a precondition for **resilience**, not the other way around.

Abimbola S, Topp SM. Adaptation with robustness: the case for clarity on the use of ‘resilience’ in health systems and global health. BMJ Glob Health 2018

Resilient PHC in Emergencies

Include the community

3

4

How should PHC relate to Emergencies?

12

What do we mean by resilience?

How can we balance resilience with equity?

How can we balance global health security with local PHC strengthening?

How do we link the global agenda in Astana to local communities?

THANK YOU
